

- 1) GIVEN: A centric axial force of 60 kN is applied to the assembly shown.  
REQ'D: (a) Normal stress in the brass shell.  
(b) Deformation of the assembly. (B9.25)

$$a) \quad A_s = (.02\text{ m})(.02\text{ m}) = \underline{0.40 \times 10^{-3} \text{ m}^2}$$

$$A_B = (.03\text{ m})(.03\text{ m}) - 0.40 \times 10^{-3} \text{ m}^2 = \underline{0.50 \text{ m}^2}$$

$$\Delta L_B = \frac{P_B L_B}{A_B E_B} \quad \text{AND} \quad \Delta L_S = \frac{P_S L_S}{A_S E_S}$$

$\Delta L_B = \Delta L_S$  BECAUSE BONDED TOGETHER

$$\frac{P_B L_B}{A_B E_B} = \frac{P_S L_S}{A_S E_S} \Rightarrow P_B = P_S \left( \frac{A_B E_B}{A_S E_S} \right)$$

$$P_B = P_S \left[ \frac{(0.5 \times 10^{-3} \text{ m})(105 \times 10^9 \text{ Pa})}{(0.4 \times 10^{-3} \text{ m})(200 \times 10^9 \text{ Pa})} \right] = \underline{0.6563 P_S}$$

$P_S + P_B = 60 \text{ kN}$  TOTAL LOAD CARRIED BY STEEL AND BRASS

$$P_S + 0.6563 P_S = 60 \text{ kN} \Rightarrow P_S = \underline{36.23 \text{ kN}}$$

$$P_B = 0.6563(36.23 \text{ kN}) = \underline{23.78 \text{ kN (C)}}$$

$$\Delta L = \Delta L_B = \sigma_B \left( \frac{L_B}{E_B} \right) = 47.5 \times 10^6 \text{ Pa} \left( \frac{.25 \text{ m}}{105 \times 10^9 \text{ Pa}} \right) = .1132 \times 10^{-3} \text{ m}$$

$\Rightarrow \underline{.1132 \text{ mm SHORTER}}$

$$\begin{aligned} \sigma_B &= \frac{P_B}{A_B} \\ &= \frac{23.78 \times 10^3 \text{ N}}{0.50 \times 10^{-3} \text{ m}^2} \\ &= \underline{47.5 \text{ MPa (C)}} \end{aligned}$$

b)

- 2) GIVEN: Two blocks of hard rubber are bonded to plate AB as shown.  
 $P = 6 \text{ kips}$  and  $G = 2.5 \text{ ksi}$ .

REQ'D: Vertical deflection of plate AB. (B9.62)

$$V_1 = \frac{P}{2} = \frac{6 \text{ kips}}{2} = \underline{3 \text{ kips}} \quad \text{EACH SIDE TAKES } \frac{1}{2} \text{ LOAD}$$

$$\delta_s = \frac{P V}{A G} = \frac{(1.25 \text{ in})(3 \times 10^3 \#)}{(6 \text{ in})(4 \text{ in})(2.5 \times 10^3 \text{ psi})}$$

$$= \underline{0.0625 \text{ in}} \quad \text{VERTICAL DEFLECTION OF PLATE AB}$$
